

LaRC

NEXTGRADE Program

Next Generation Revolutionary Analysis and Design Environment (NEXTGRADE) Program

Next Generation Space Telescope Technology Challenge

July 9, 1997

NASA Goddard Space Flight Center

Presenters: Danniella Muheim, Ronnie Gillian, Jerry Housner

POC: Jerry Housner
NASA Langley Research Center
(757) 864-2907
E-Mail: j.m.housner@larc.nasa.gov

VISION

LaRC

NEXTGRADE Program

Pioneer a revolutionary design and analysis environment for future aerospace systems

- **Significantly shorten design and development time**
- **Reduce life cycle costs**
- **Reduce new technology insertion time**
- **Improve performance**

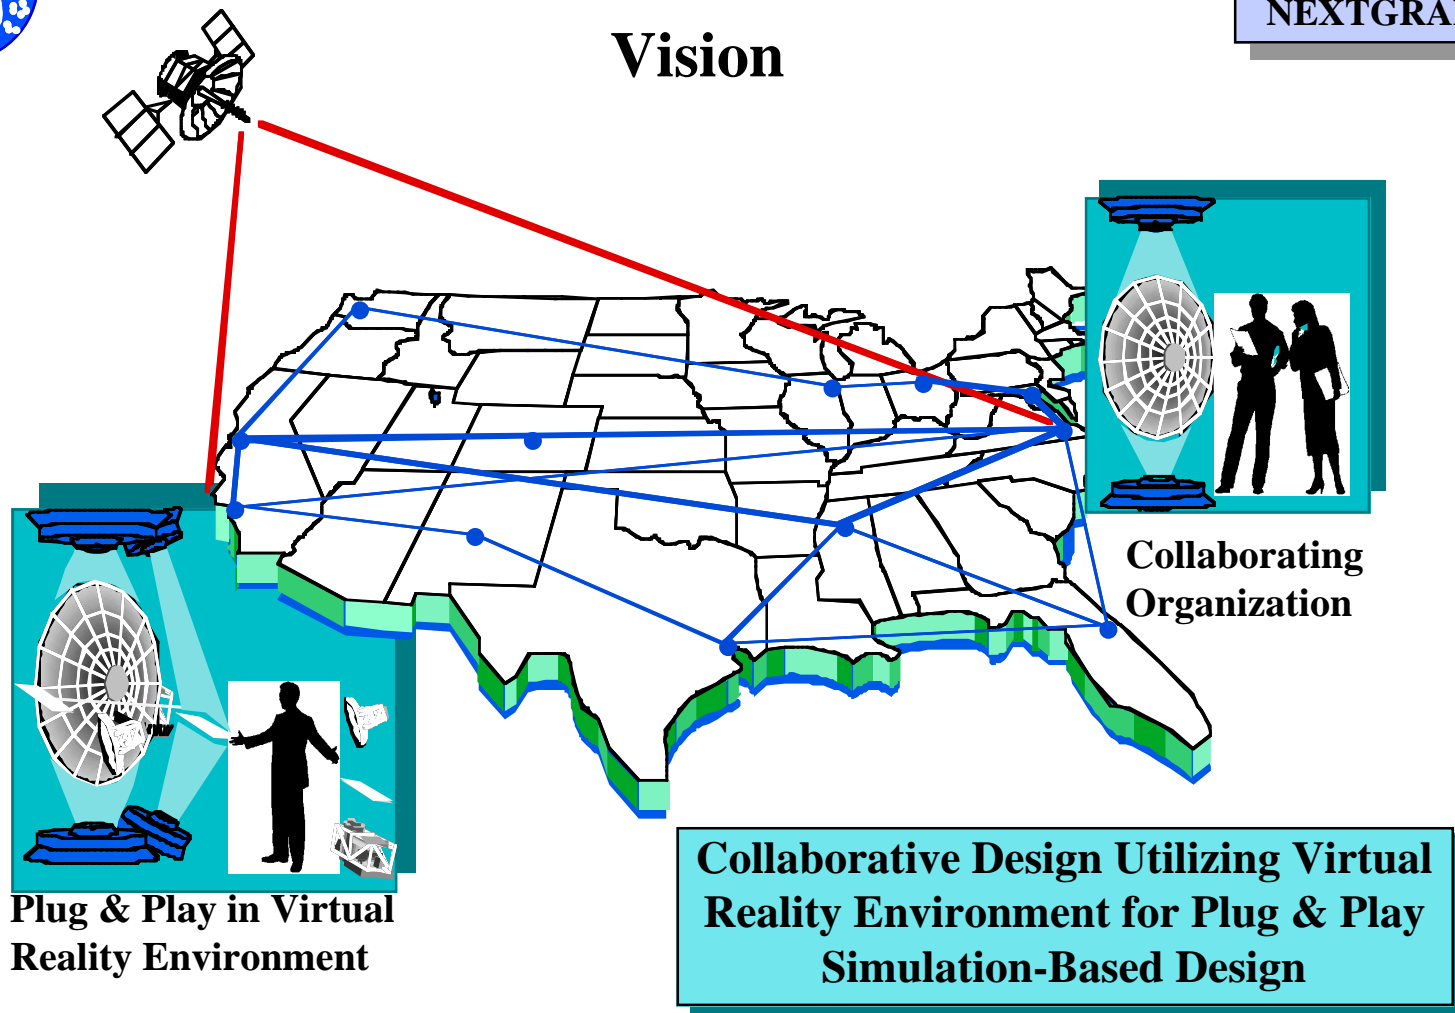

Next Generation Analysis and Design Environment

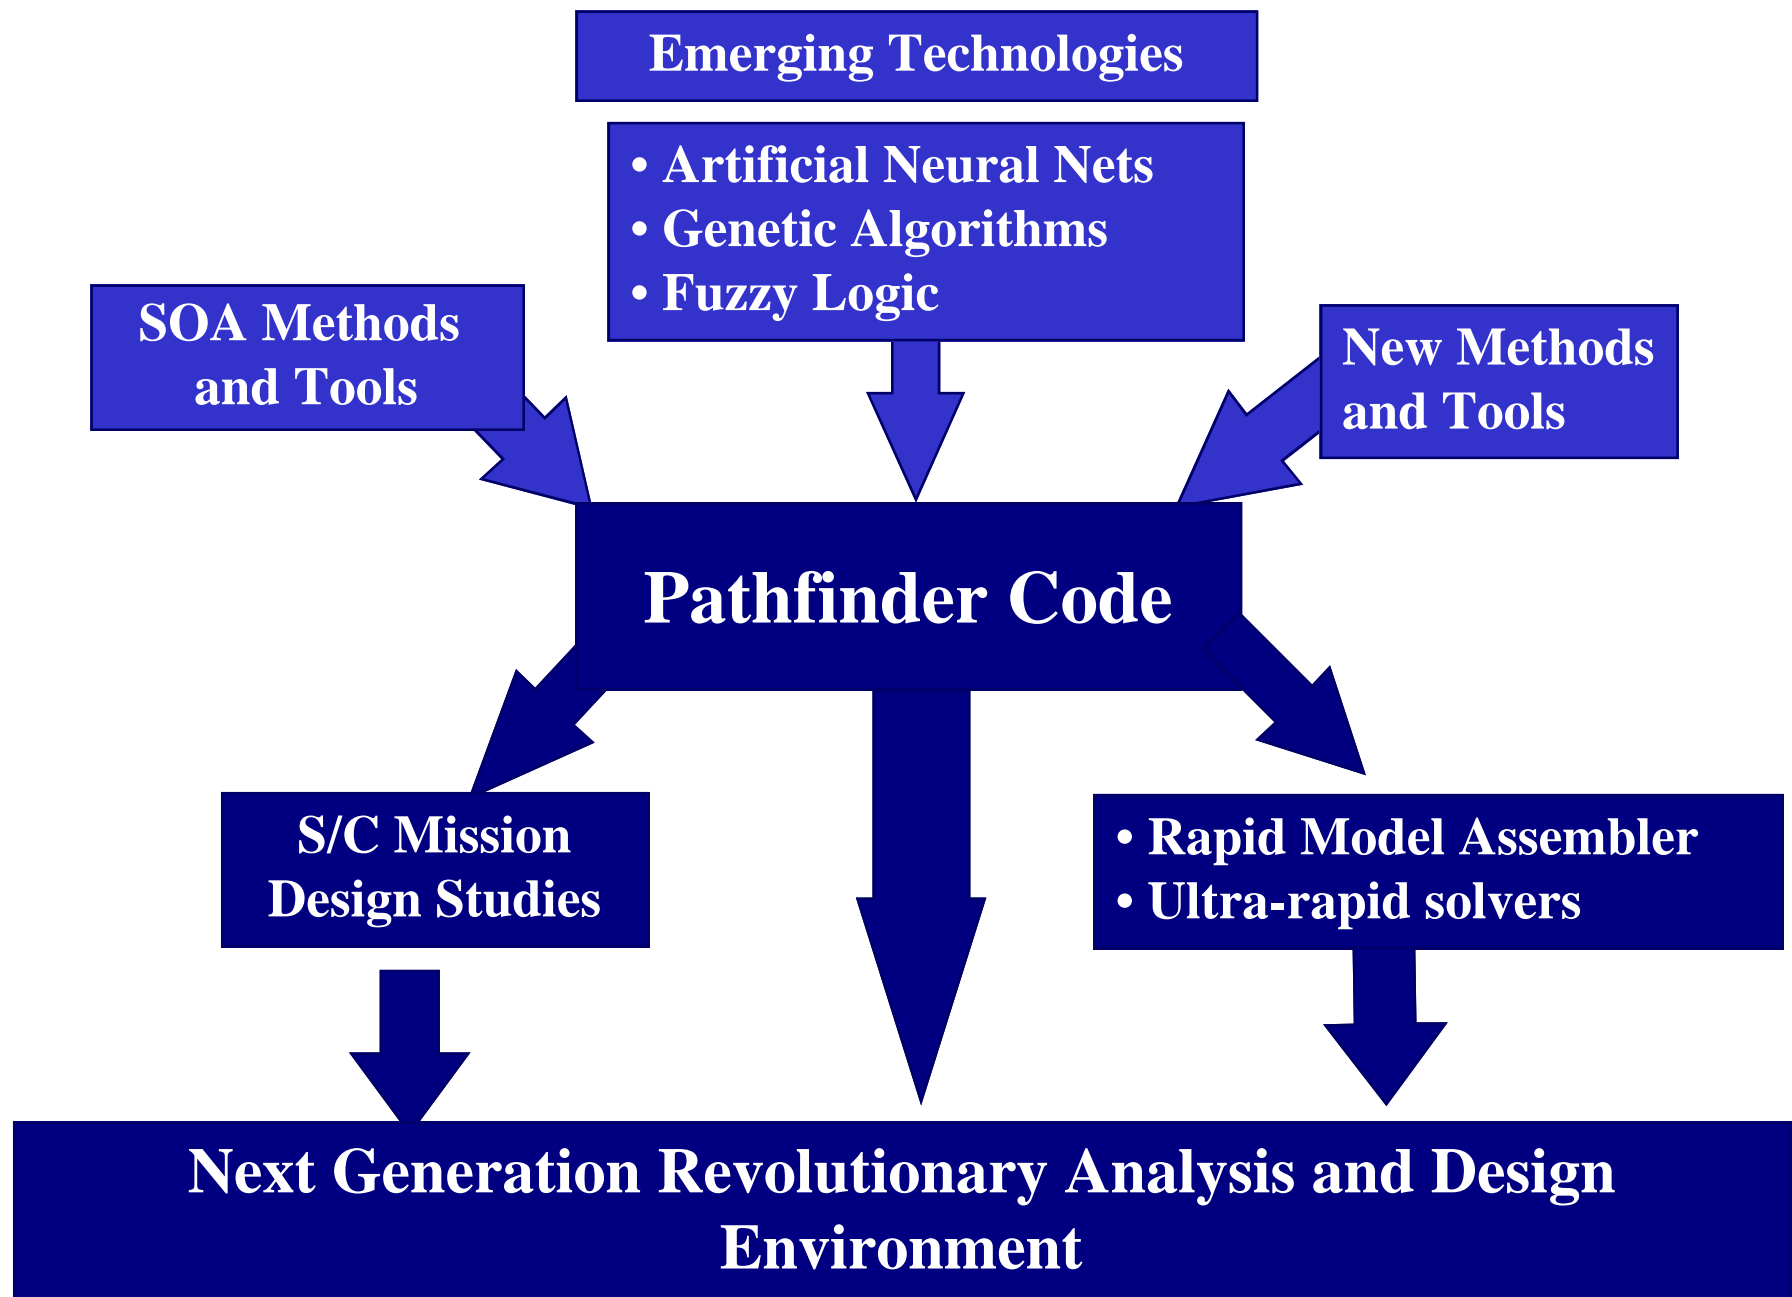

LaRC

NEXTGRADE Program

Vision

CONVENTIONAL FINITE ELEMENT MODELING OF COMPLEX SYSTEMS

High Speed Civil Transport

Space Station

- Requires months to model
- Changes expensive and time consuming

Rapid *Model* Assembler

LaRC

NEXTGRADE Program

Problem: Accurate *modeling* and integration is a tedious long process

Solution:

- Create object-oriented library of part *models*
- Assemble spacecraft *models* using library of part *models*
- Select part *models* graphically (point and click) or orally
- Operate on part geometry and *model* simultaneously
- Graphically size part *models* along with part geometry
- Assemble sized part *models* along with sized part geometries

INTERFACE TECHNOLOGY

LaRC

NEXTGRADE Program

Provides a Reliable Capability which Enables the Synthesis of Incompatible, Independently Developed, Finite Element Models

Detail Modeling

Conventional Technology

New Interface Technology

Reduce modeling time

Repair Modeling

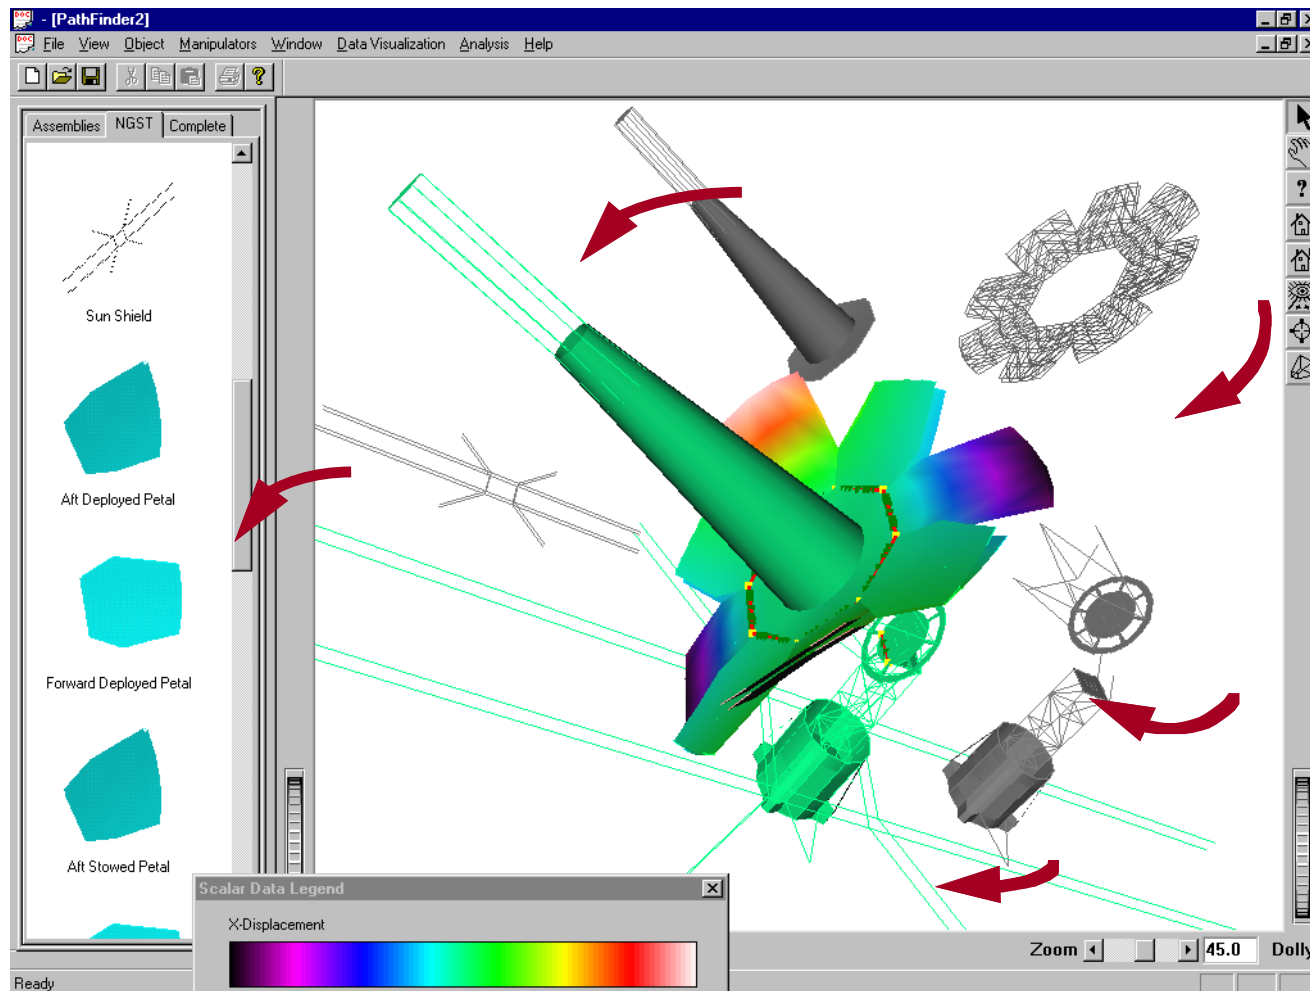

Address safety and life cycle issues

Assembly of Incompatible Models

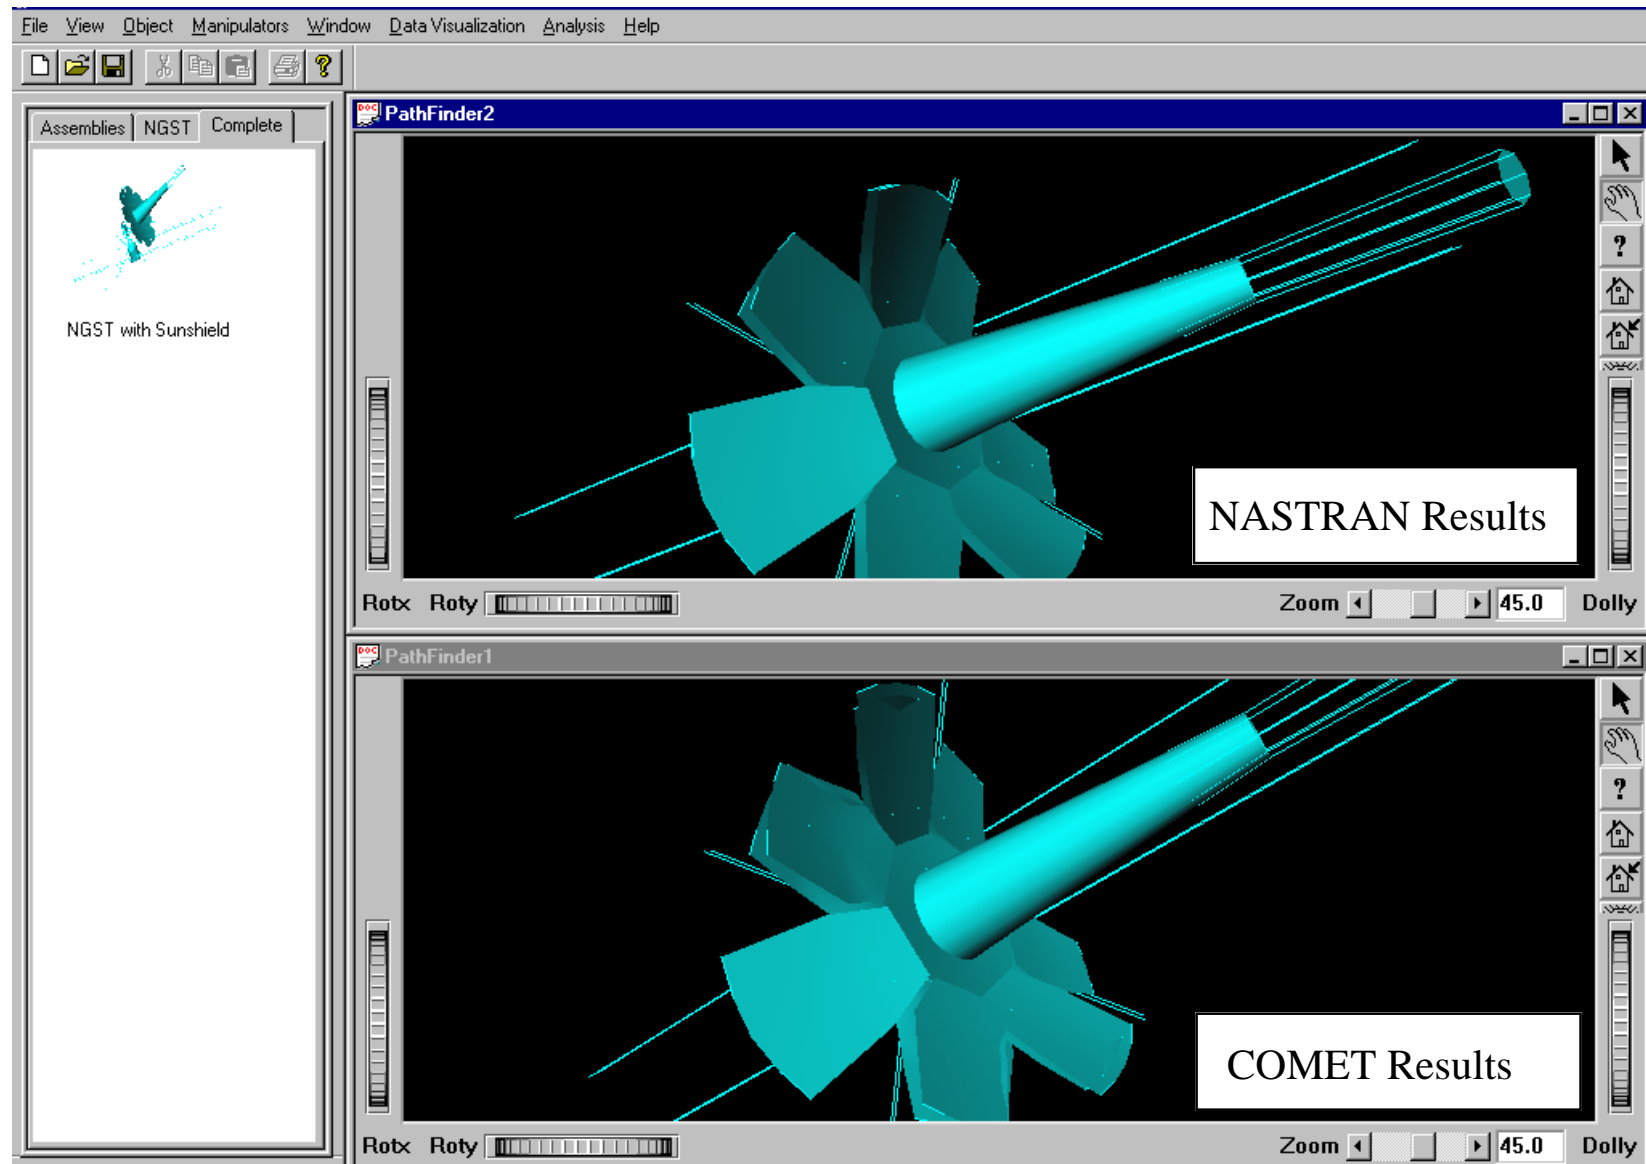

Enable new era of collaborative model sharing

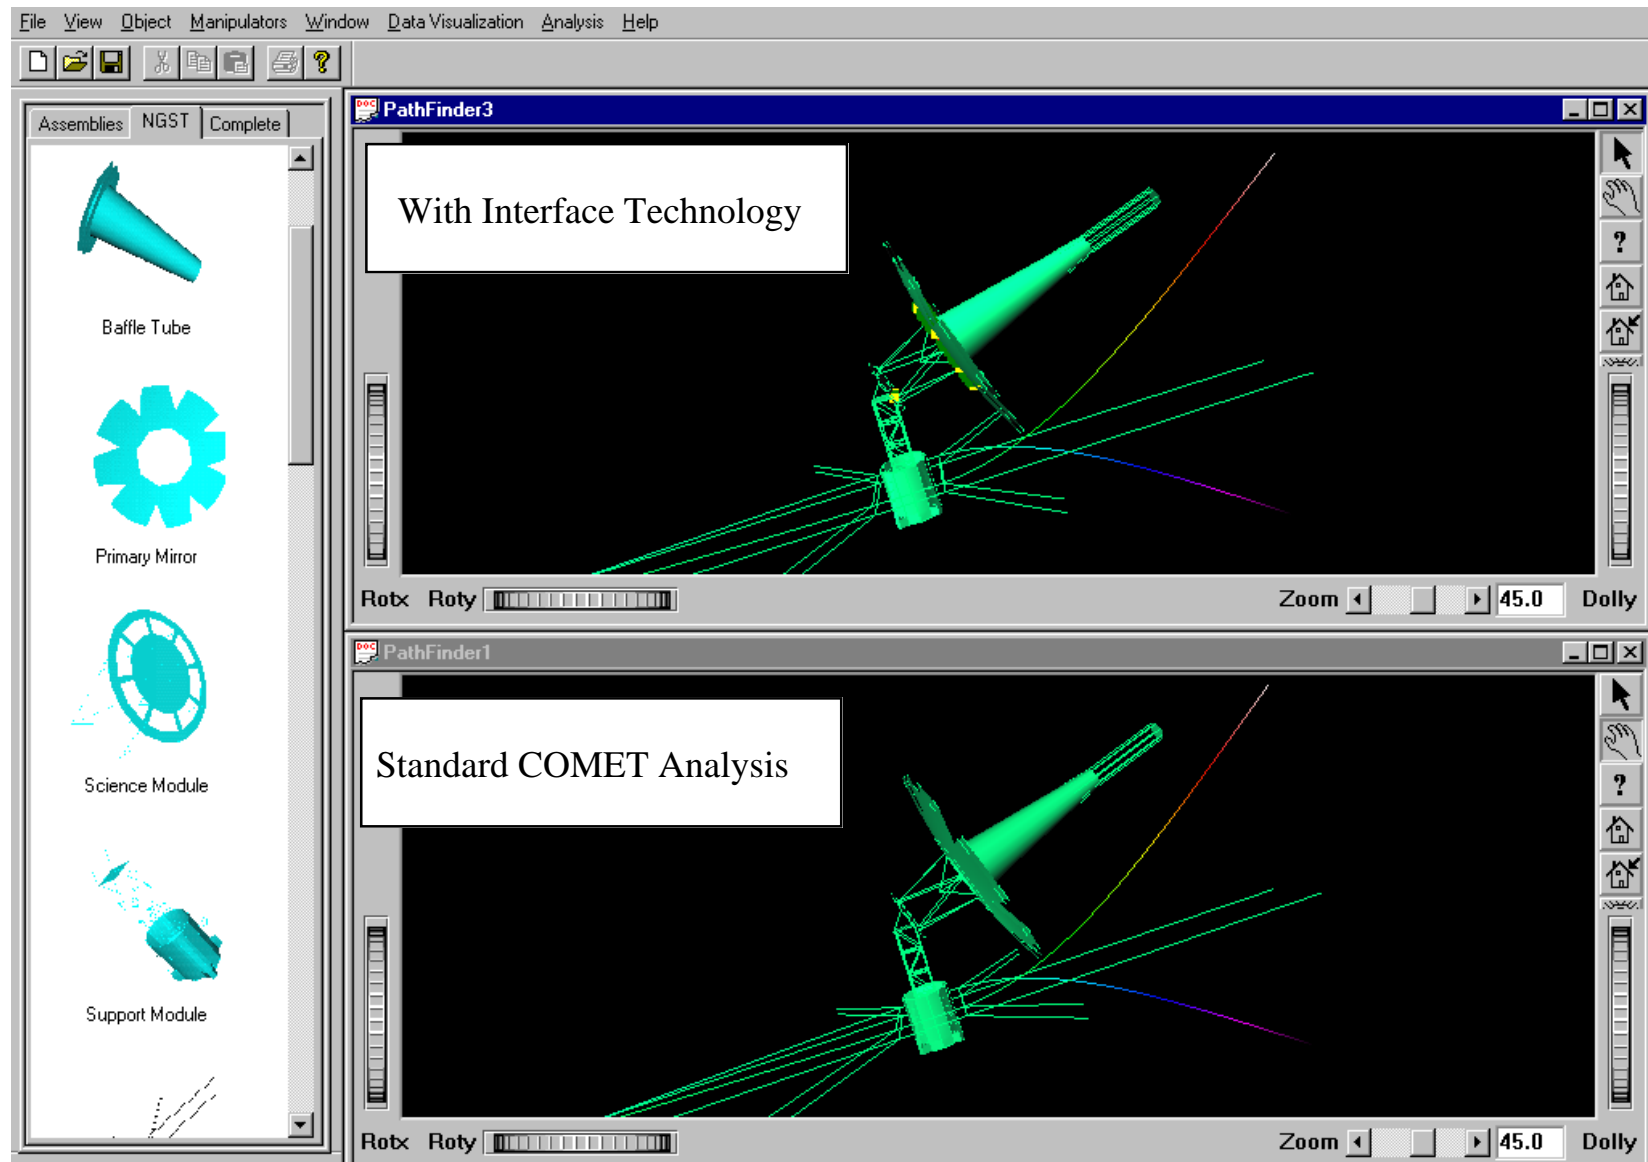

NGST Model Built From Library of Stock Objects

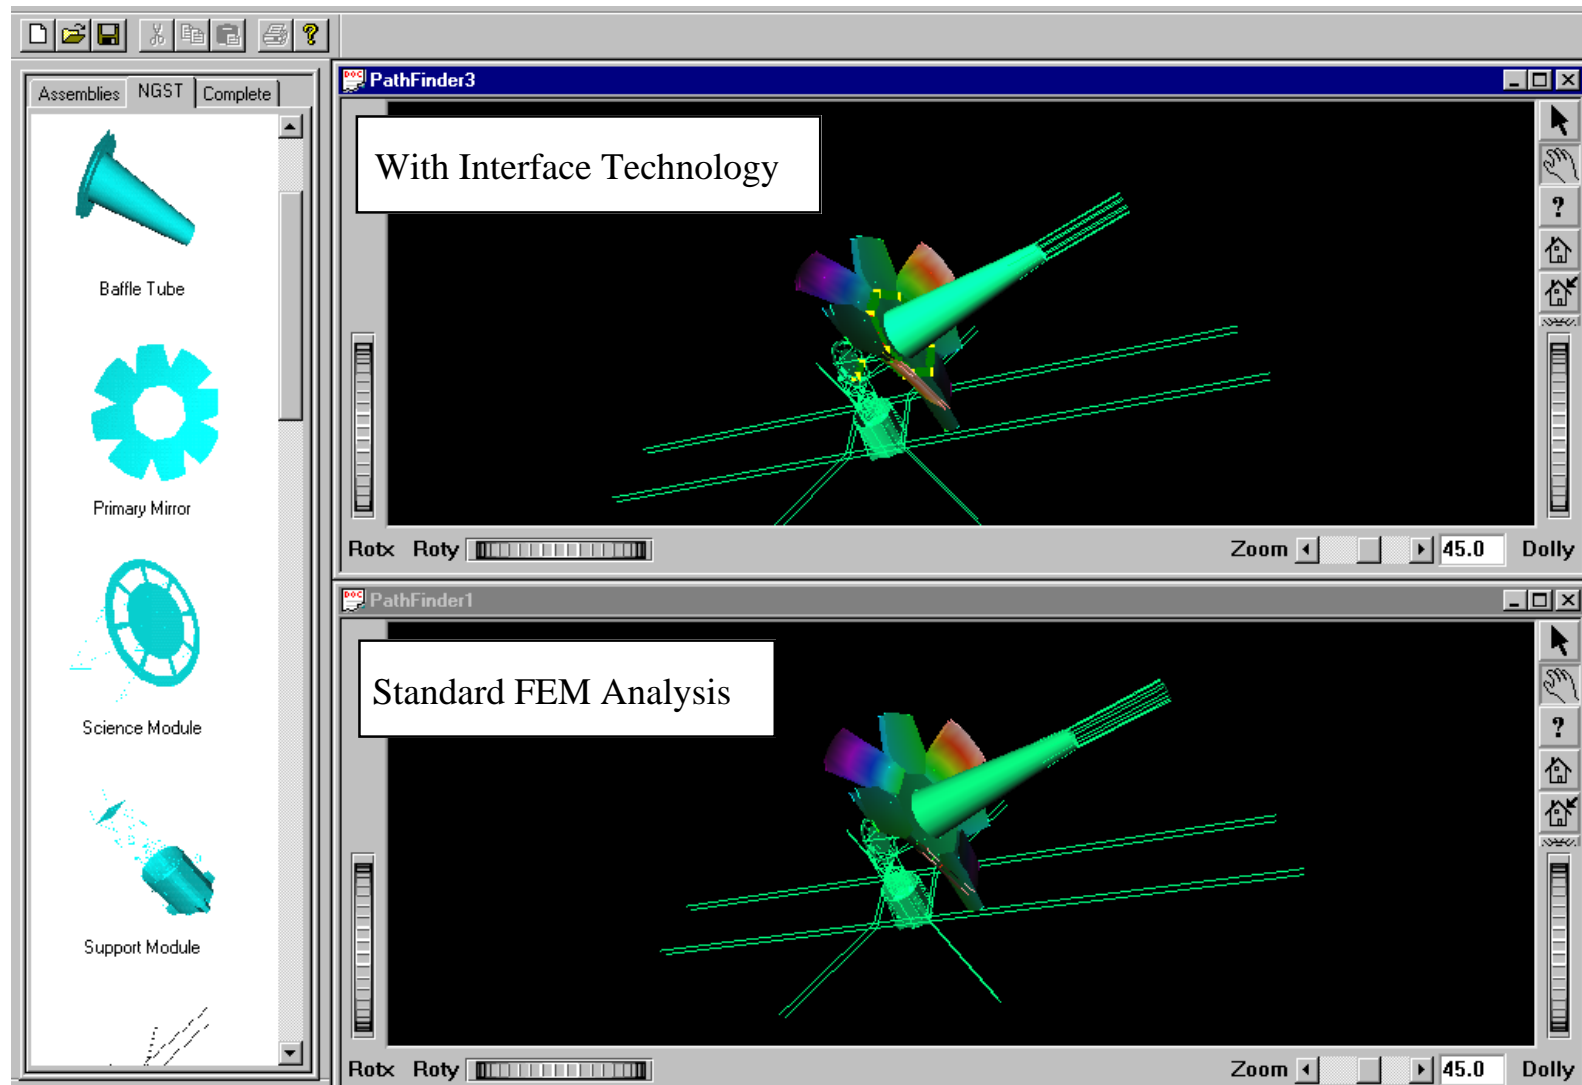

NASTRAN/COMET Comparison

COMET Comparison with Interface Technology

Comparison of Standard FEM Analysis with Interface Technology

RAPID MODEL ASSEMBLER DEVELOPED FOR AEROSPACE STRUCTURES

SUMMARY

LaRC

NEXTGRADE Program

- **Developing revolutionary computational methods to enable collaborative and immersive analysis and design environment**
- **Implementing and developing rapid modeling and assembly methodology**
- **Developing ultra-rapid methods utilizing computational intelligent concepts**
- **Integrating multi-disciplinary and cross-platform analyses**
- **Methods and tools find immediate application on a broad class of analysis and design applications**
